Frequently asked questions (FAQ) are answered on our web site at: http://AERONAV.FAA.GOV.
See the FAQs prior to contact via toll free number or email.

ATTENTION

THIS CHART CONTAINS OFF ROUTE OBSTRUCTION CLEARANCE ALTITUDES (OROCA).
The off route obstruction clearance altitudes shown in rectangles bounded by dotted lines of latitude and longitude are represented in THOUSANDS and HUNDREDS of feet above mean sea level. The OROCA is based on information available concerning the highest known features in each quadrangle, including terrain and manmade objects. OROCA provides 1000 feet of clearance in non-mountainous areas and 2000 feet of clearance in designated mountainous areas within the United States. For areas in Mexico and the Caribbean which are located outside of the U.S. ADIZ, OROCA provides obstruction clearance with a 2000 foot buffer. This altitude is provided for obstruction clearance only. It does not provide for NAVAID signal coverage or communication coverage, and would not be consistent with altitudes assigned by the Traffic Control.

Example: 12,500 feet — 12 5
